Evening Brief

Date: Saturday September 1st, 2018

Weather Summary

Isolated showers and thunderstorms will develop across the higher terrain of southeastern Utah on Sunday. Elsewhere, conditions will be seasonal with light winds. Moisture will increase across the south on Monday and Tuesday, with thunderstorm coverage increasing across the southern part of the Great Basin, and possibly moving north by Wednesday and Thursday.

Preparedness Levels & Great Basin Fire Activity (from WFDSS)

Great Basin	4	Light Initial Attack Activity
National	4	GB New Fires and Acres: 21 fires 1,204.5 acres; 2,110 acres large fire growth

Fuels and Fire Behavior advisory has been issued for [Northern Great Basin](#)

Fuels/Fire Potential

Previously critically dry fuels across the northern half of the Geographic Area have modified significantly in recent days across ID/WY due to wetting rains and colder temperature, and have modified slightly over northern NV/UT due to cooler temperatures and higher RH.

Sagebrush Live Fuel Moisture levels across the northern half of the Great Basin are near or just below late-August normals, and grasses are cured in all areas. ERC's are below the 50th percentile across most of the southern half of Nevada, the southern 2/3 of Utah, into the AZ Strip. ERC's dropped significantly across ID/WY and are below the 50th percentile in the Central ID Mountains, and between the 50th-70th percentile in the lower elevations. ERC's in northern UT/NV dropped slightly to the 60th-80th percentile in most areas. However, 1000-hr fuels are still well below normal in many of these areas.

Drier and warmer air will move across much of the Great Basin this week. This will rapidly dry finer fuels across Nrn NV and NW UT back towards critical levels. Across ID/WY this will be a much more gradual process, due to the recent wetting rains.
